

Architectural floor plan of a school building, showing various rooms, corridors, and structural details. The plan includes labels for rooms like 'Klasa' (Classroom), 'Salonik' (Living room), 'Kuchnia' (Kitchen), and 'Łazienka' (Bathroom). It also shows structural elements like 'Ściana zewnętrzna' (External wall), 'Ściana wewnętrzna' (Internal wall), and 'Strop' (Ceiling). The plan is oriented with North (N) at the top.

1. NAME OF THE PROJECT Formosa, A. and T. (2017). <i>Formosa, A. and T. (2017). Formosa, A. and T. (2017).</i>																													
2. PROJECT DESCRIPTION The project is a research study on the impact of climate change on the environment. It aims to collect data on the temperature, precipitation, and wind speed over a period of 12 months. The data will be used to analyze the trends and patterns of climate change and its impact on the environment.	The project is a research study on the impact of climate change on the environment. It aims to collect data on the temperature, precipitation, and wind speed over a period of 12 months. The data will be used to analyze the trends and patterns of climate change and its impact on the environment.																												
3. PROJECT OBJECTIVES The project has the following objectives: <ul style="list-style-type: none"> To collect data on the temperature, precipitation, and wind speed over a period of 12 months. To analyze the trends and patterns of climate change and its impact on the environment. To identify the factors that contribute to climate change and its impact on the environment. To develop a model to predict the future climate change and its impact on the environment. 	The project has the following objectives: <ul style="list-style-type: none"> To collect data on the temperature, precipitation, and wind speed over a period of 12 months. To analyze the trends and patterns of climate change and its impact on the environment. To identify the factors that contribute to climate change and its impact on the environment. To develop a model to predict the future climate change and its impact on the environment. 																												
4.
