

The diagram illustrates the electrical wiring for a lift system. At the top, the main power supply is shown with lines for L1, L2, L3, N, and PE. Two main distribution lines are labeled with current ratings: 0,3-0,5A and 0,03A. The system is divided into two main sections: DŹWIG (Lift) and OŚWIETLENIE SZYBU (Shaft Lighting). The DŹWIG section includes a control panel (D) and a lighting fixture (L). The OŚWIETLENIE SZYBU section includes a series of light fixtures (L) and a heating element (GRZAŁKA). The wiring is detailed with various components such as switches, relays, and terminal blocks, and is labeled with current ratings like 10A, 6A, and 40-63A. The diagram also shows the connection to the lift motor (M) and the shaft lighting control unit (F).
